

Better data. Sharper insight.

Automate data collection, transformation, and integration into SAP sustainability solutions.

Automated utility data feeds

- 

SAP Environment Management
- 

SAP Sustainability Footprint Management
- 

SAP Sustainability Control Tower
- 

Integration to 3rd Party or custom solutions

ClearStandard 1.0 automates the collection of utility data for multiple sustainability use cases.

Insight into sustainability performance is only as good as the data driving it.

If your data is old, unreliable, or plagued with inaccuracy, monitoring KPIs and improving performance is a guessing game—regardless of the software you have in place.

Feed your systems fresh data.

ClearStandard solves the data problem with automated collection, transformation, and integration to the applications your business relies on to measure and manage sustainability performance, whether that's reporting on scope 1, 2, or 3 GHG emissions, calculating carbon footprint for organizations and products, or driving timely ESG reporting.

The good news for SAP customers

ClearStandard is the only data transformation platform with standard out-of-the-box integration to SAP's portfolio of sustainability solutions. Built on the SAP Business Technology Platform (BTP), ClearStandard offers simple and seamless cloud connectors for customers using solutions such as SAP Environment Management (EM), SAP Sustainability Footprint Management (SFM), and SAP Sustainability Control Tower (SCT).
